AZURE at the service of your documents with GADA-i

Manage your document lifecycle automatically with artificial intelligence

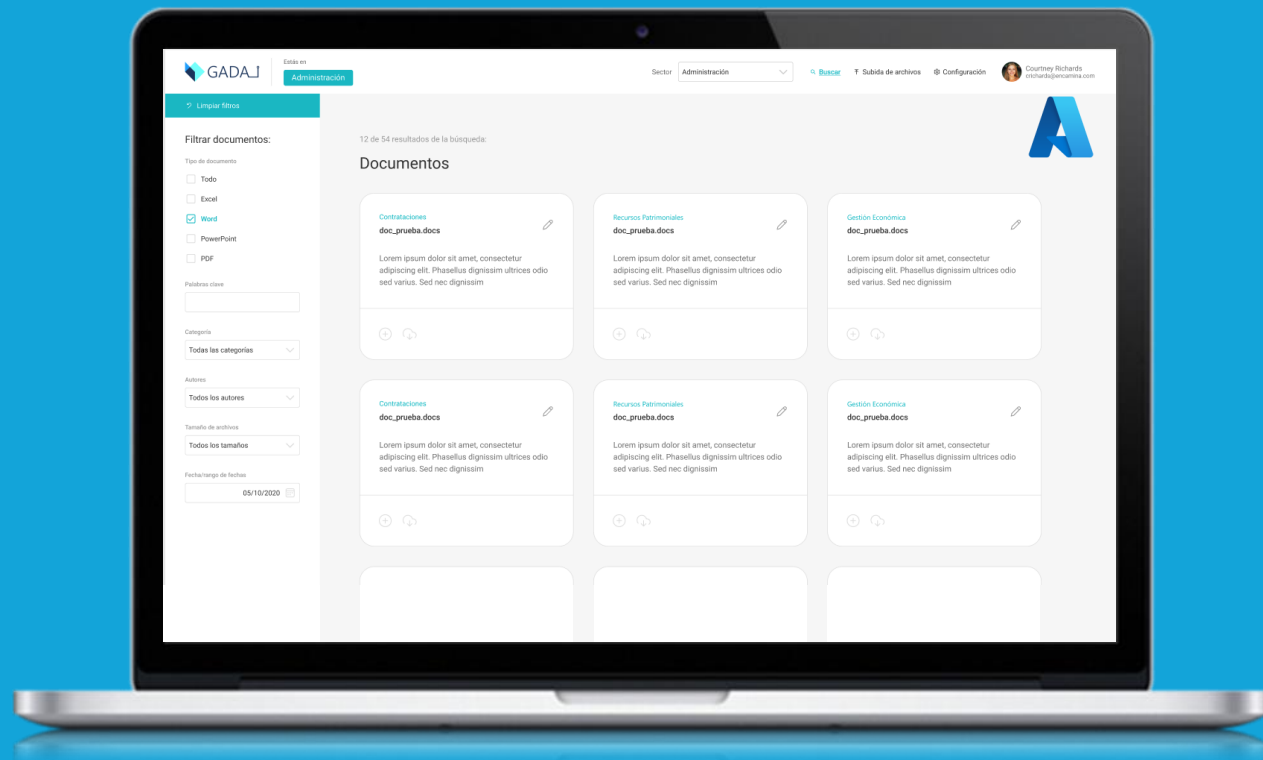

Artificial Intelligence in your Digital Document Management

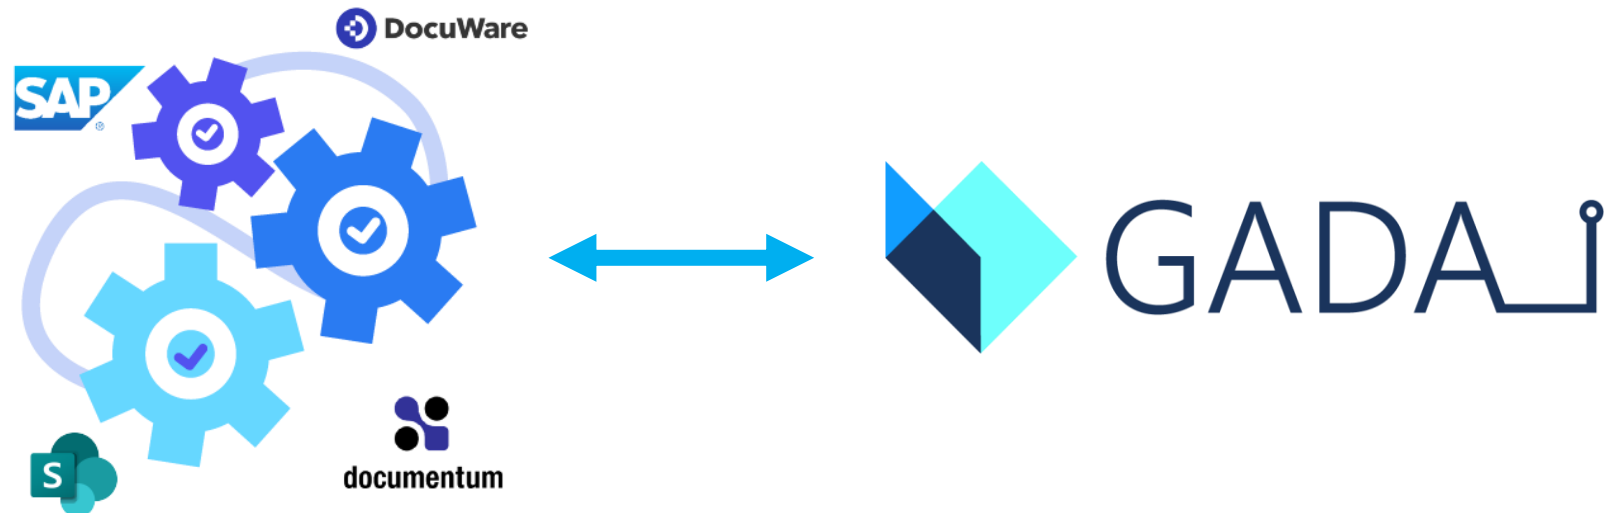

What is GADA-i?

- GADA-i is a product consisting of a set of Azure cloud services that help **classify**, **archive**, and **recover** files and documents automatically, thanks to Azure's artificial intelligence.
- It has an intelligent search engine that allows you to swiftly search and find documents by any of their contents, making them **available whenever you need them**.
- GADA-i is **integrated with current storage and management systems** (Salesforce, SAP, Dynamics 365, SharePoint, FileNet, etc.), being able to download from these systems documents without active collaboration or that are less used but can be recovered quickly and securely.

How does GADA-i help me?

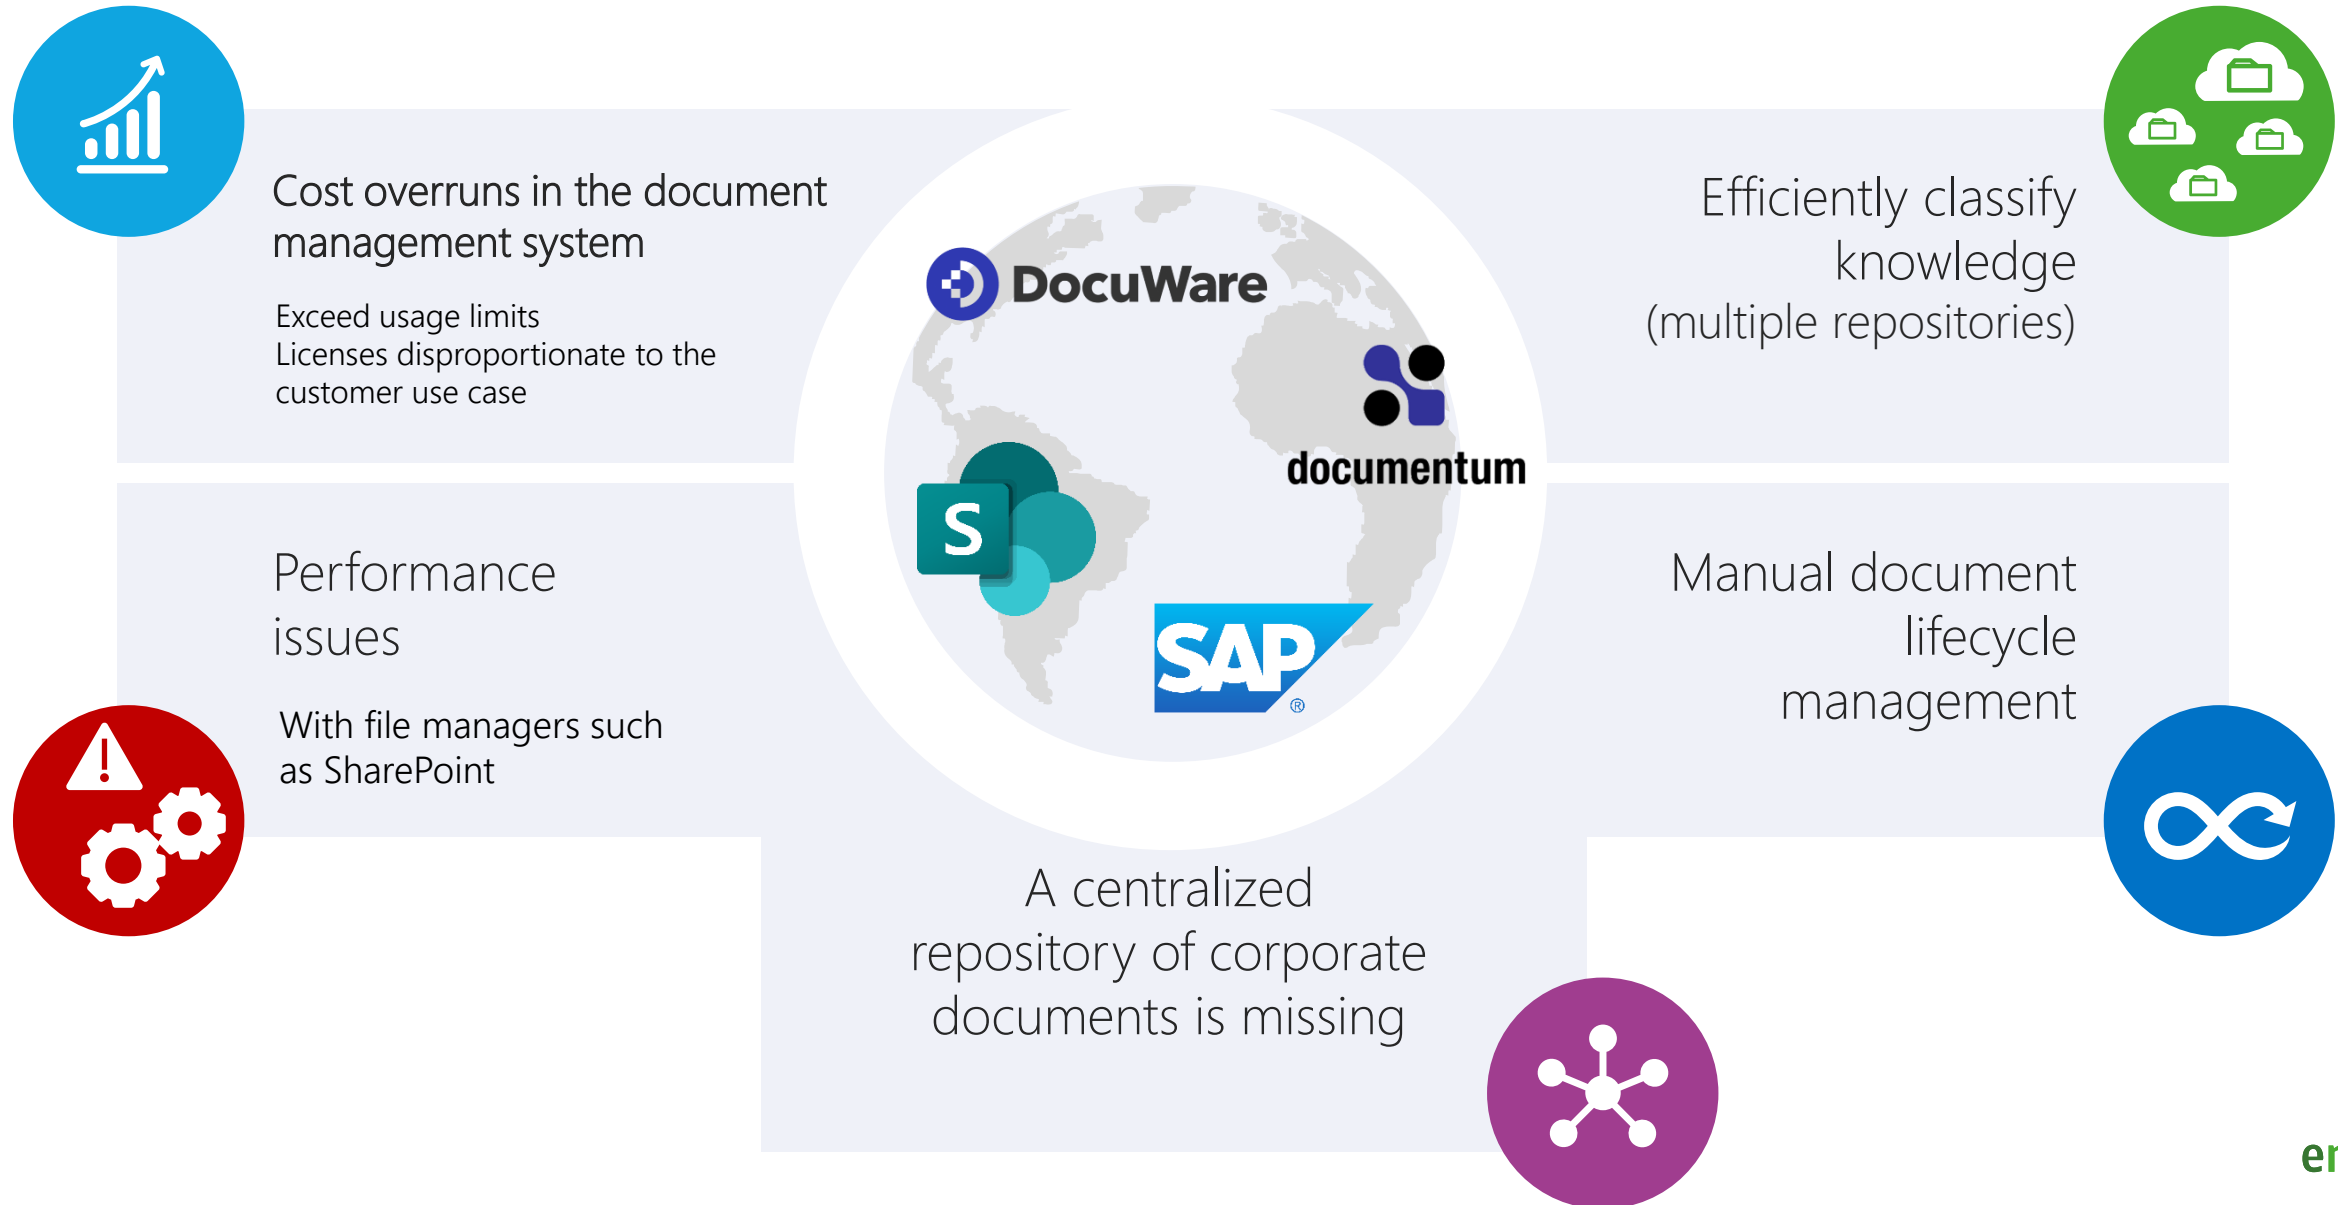

- GADA-i provides a system that helps manage the file's lifecycle automatically (save, historified/archived, retrieved and deleted), using Microsoft Azure technology.
- By **connecting with existing systems** (SalesForce, SAP, Dynamics 365, SharePoint, FileNet, etc.), we can free up your burden and reduce your cost.
- It offers a **storage alternative to SharePoint** (or any corporate documentation repository) for those files that must be classified, saved or historified (archived), but that must be kept accessible at any time, such as files, claims, policies, contracts, mortgages, invoices, etc.
- All this is under the Microsoft **cloud security paradigm**.

GADA-i Scenarios and Use Cases

Problems with document management systems

Use cases

Efficient and unlimited document management of your files

Many documents and files stored in your document management system can cause the platform to be unstable and have performance issues.

Document archiving with automated security policies and rules

GADA-i implements the document lifecycle in Azure and allows you to apply specific business rules to archive documents and thus save storage costs.

Making knowledge accessible in a structured way

We have both digital and paper documents, and we need them to contribute knowledge to the company. To do this, we efficiently classify the information so that you can search by content.

Acceleration and automation of forms associated with documents

We can train AI to recognize these documents, extract the information and save it in a database.

Saving on unnecessary Document Managers

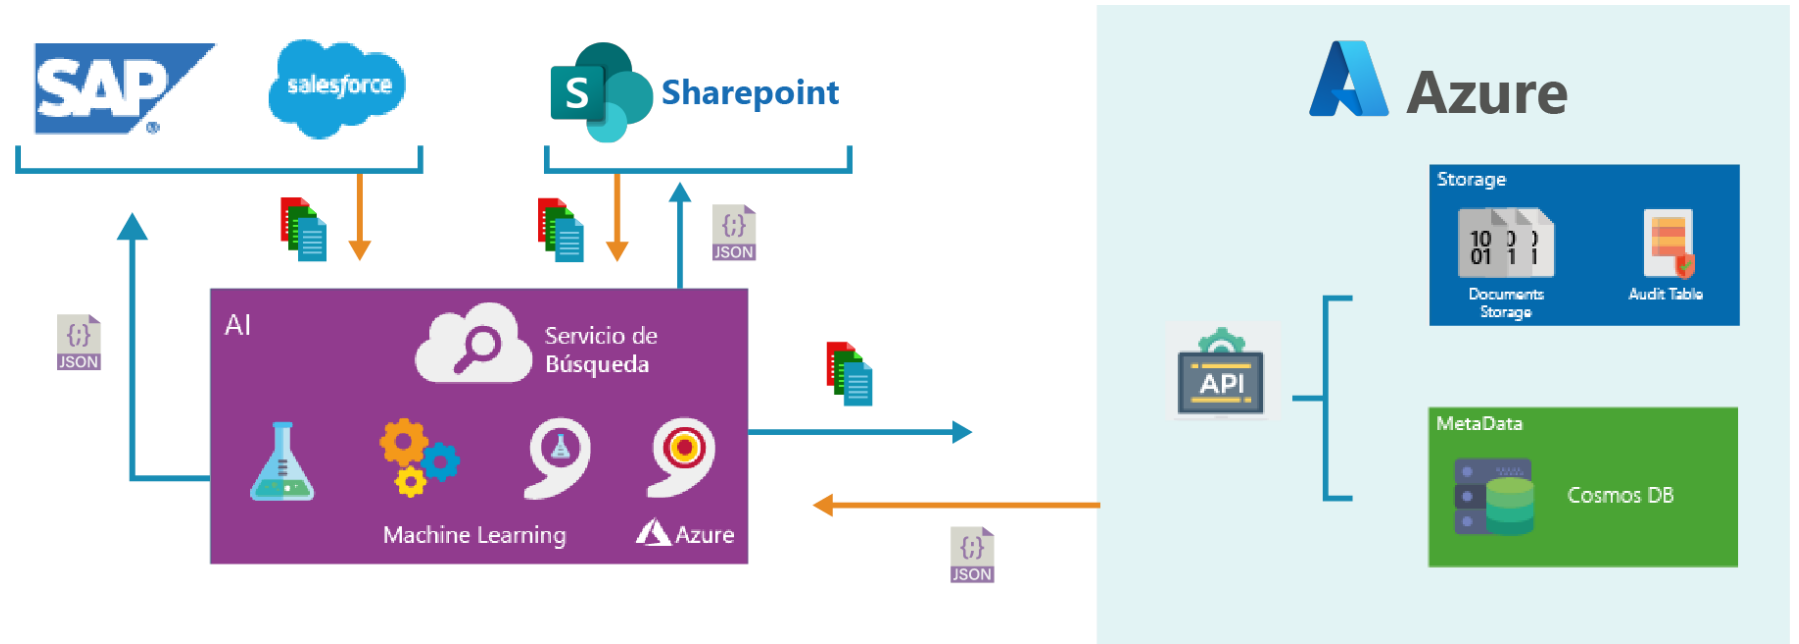

It makes no sense to pay expensive storage licenses for documents that can naturally be stored in Azure.

GADA-i is composed by...

100% Cloud-Based Software Architecture

- GADA-i connects to any system via APIs (via REST) to operate with the archive.
- When files are uploaded, GADA-i automatically classifies them and adds them to the search thanks to automatic content extraction using custom AI.
- Stores files in Azure in an almost unlimited way, with high availability and performance.
- Controls the lifecycle of files automatically, defining business rules to change state when those rules or policies are met.

What document formats does GADA-i support?

Compressed format

.CSV, .EPUB, .HTML, .JSON, .PDF, .XML, .Zip, .GZ

Images

png, jpg, gif, Tiff, svg, eps, BPM

XML for geographic representations

.KML

Videos and music

Mp4, Avi, mov | mp3, wav

Microsoft Office formats:

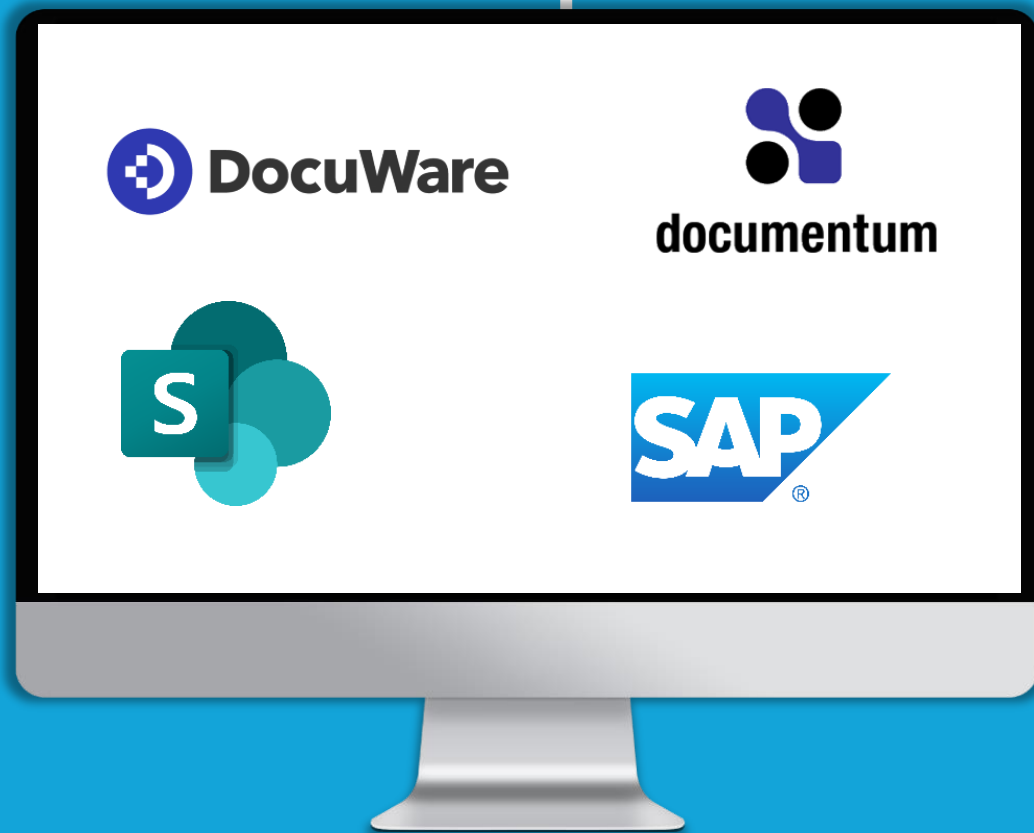

DOCX/DOC/DOCM, XLSX/XLS/XLSM, PPTX/PPT/PPTM, MSG | (Outlook emails), XML (both 2003 and 2006 WORD XML)

Open document formats:

ODT, ODS, ODP

How does GADA-i work?

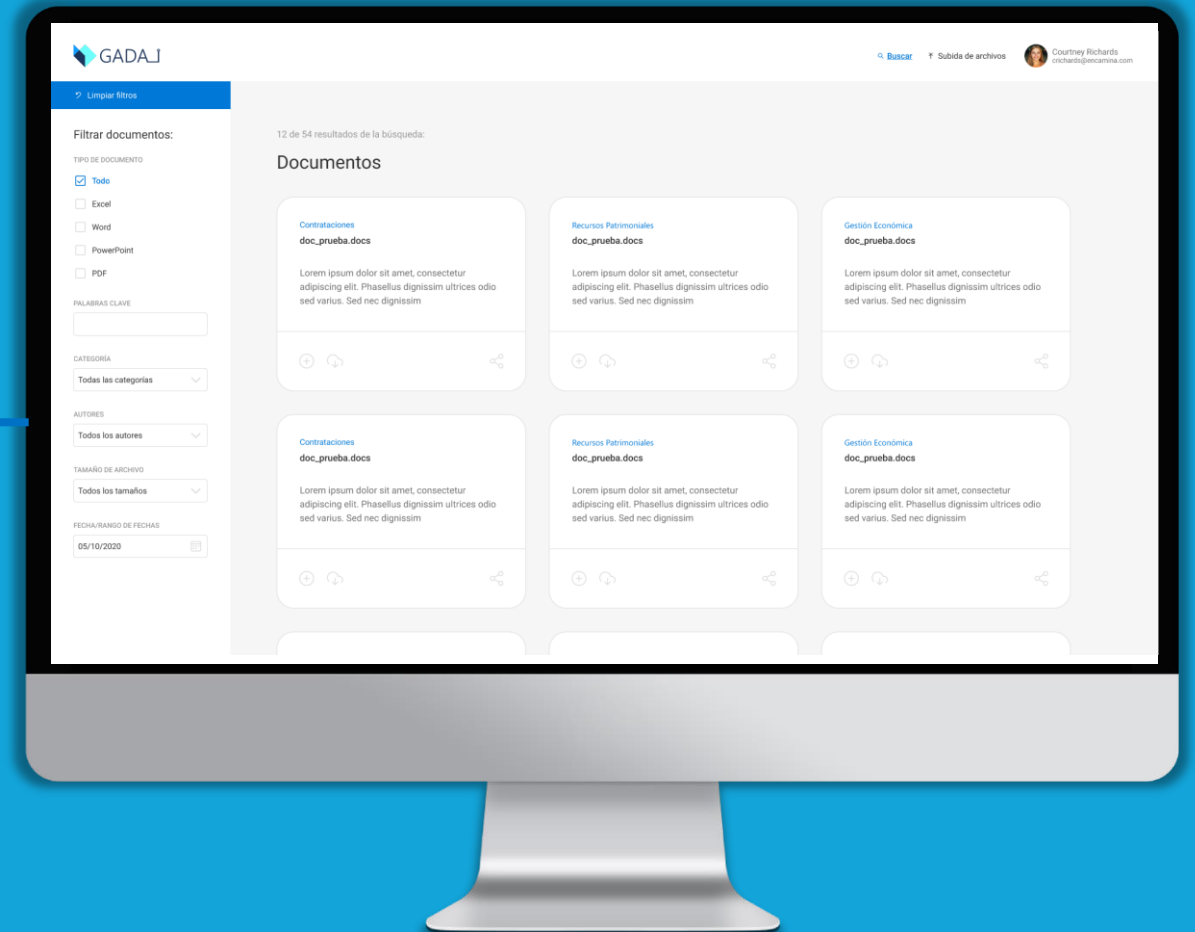

There are two ways to use GADA-i (1)

- A repository has been connected to GADA-i and **users interact with the corporate repository** they are used to working with.
- This repository has now expanded its archiving capabilities thanks to being connected to GADA-i.

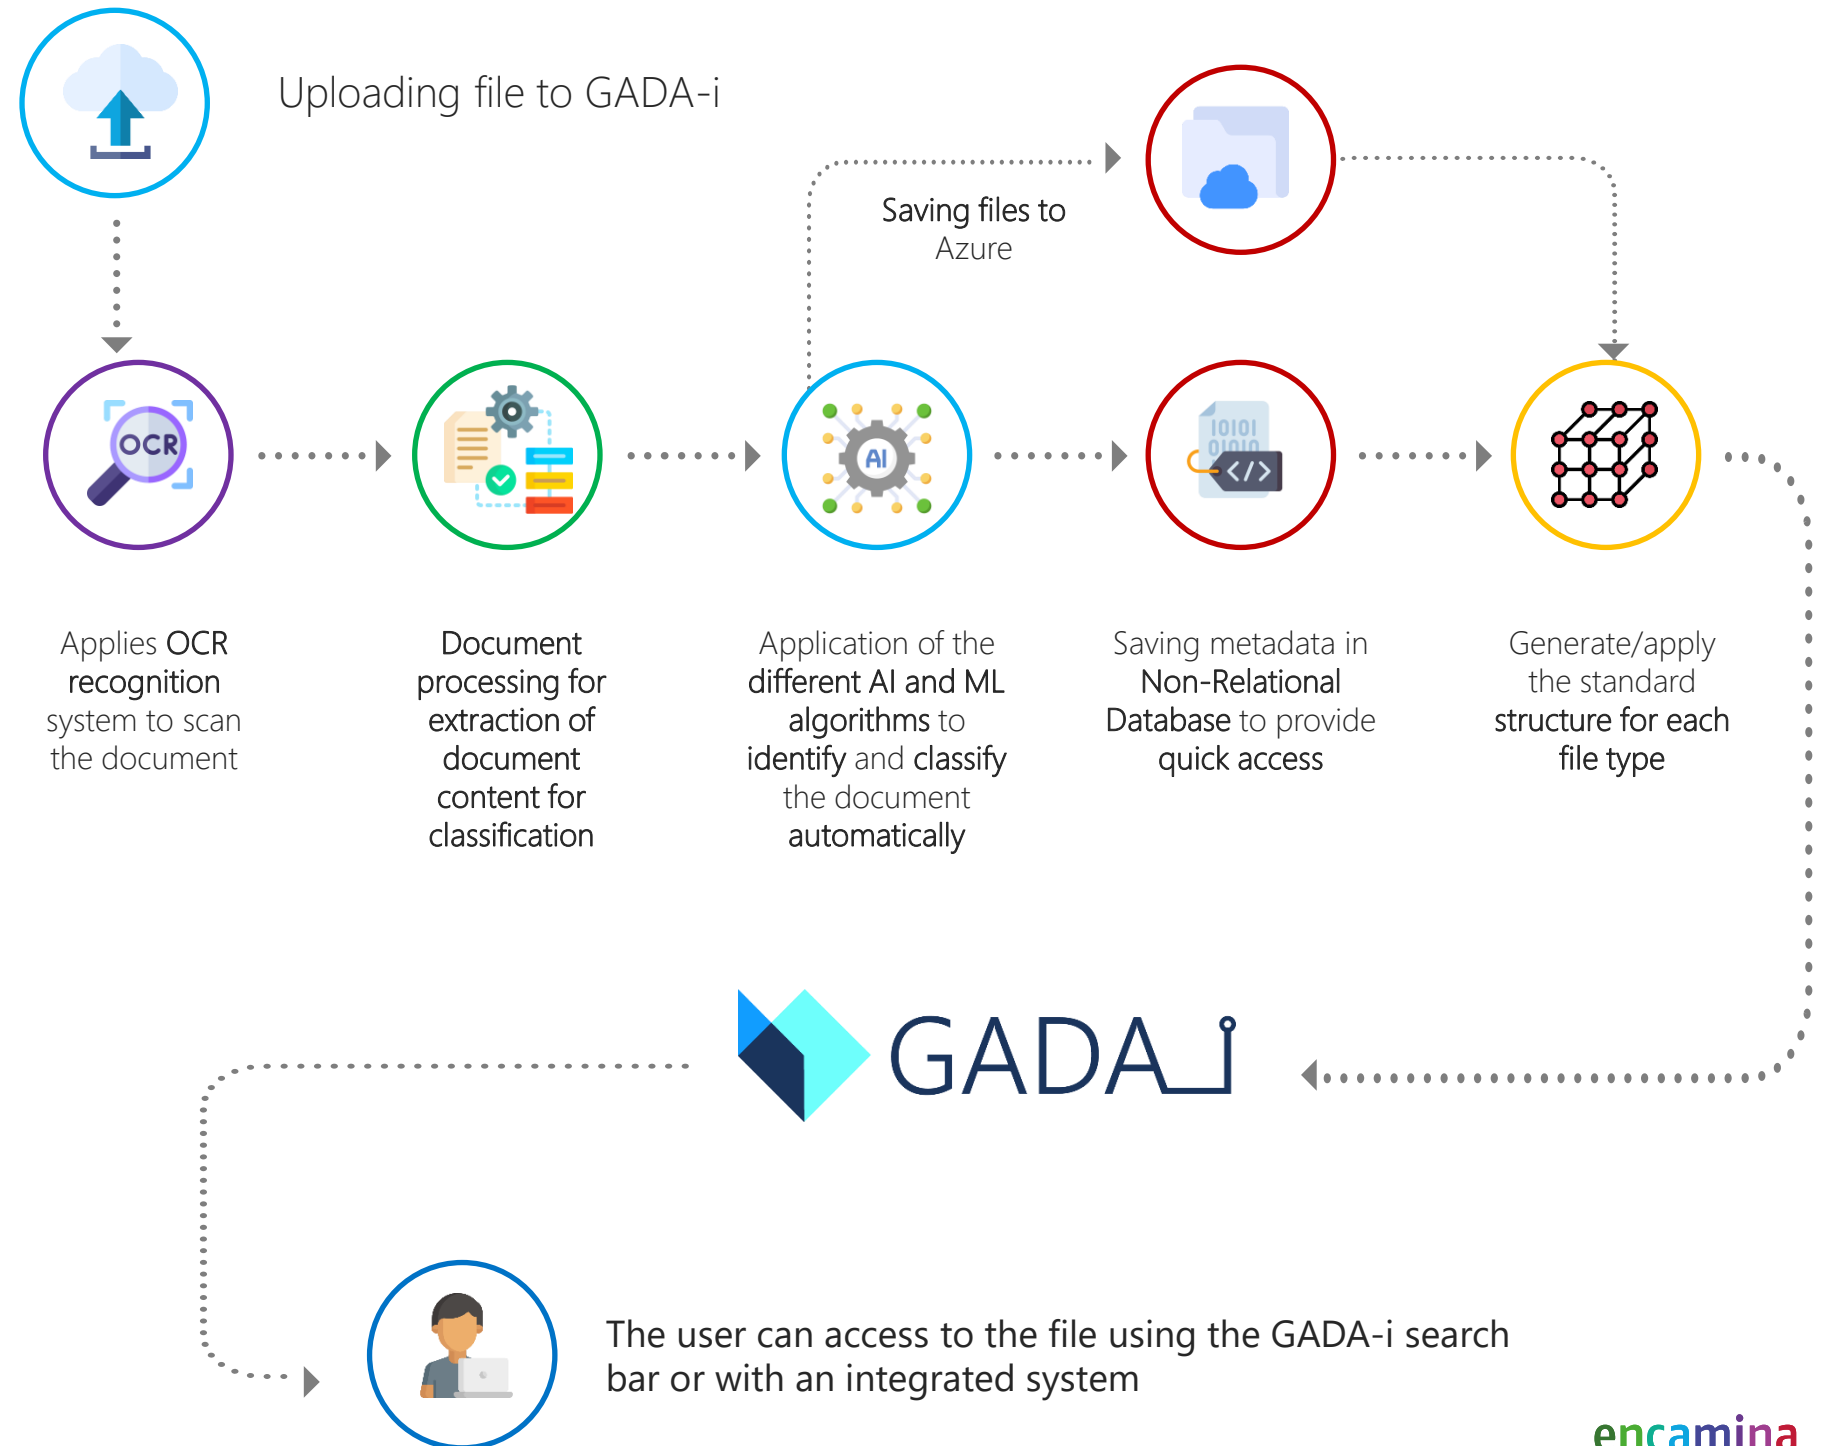

There are two ways to use GADA-i (2)

GADA-i **integrates with your current storage systems** (Salesforce, SAP, Dynamics 365, SharePoint, FileNet, etc.) so that you can upload your least used documents to these systems and **recover them quickly and securely**.

[View Prototype](#)

How does GADA-i process the files?

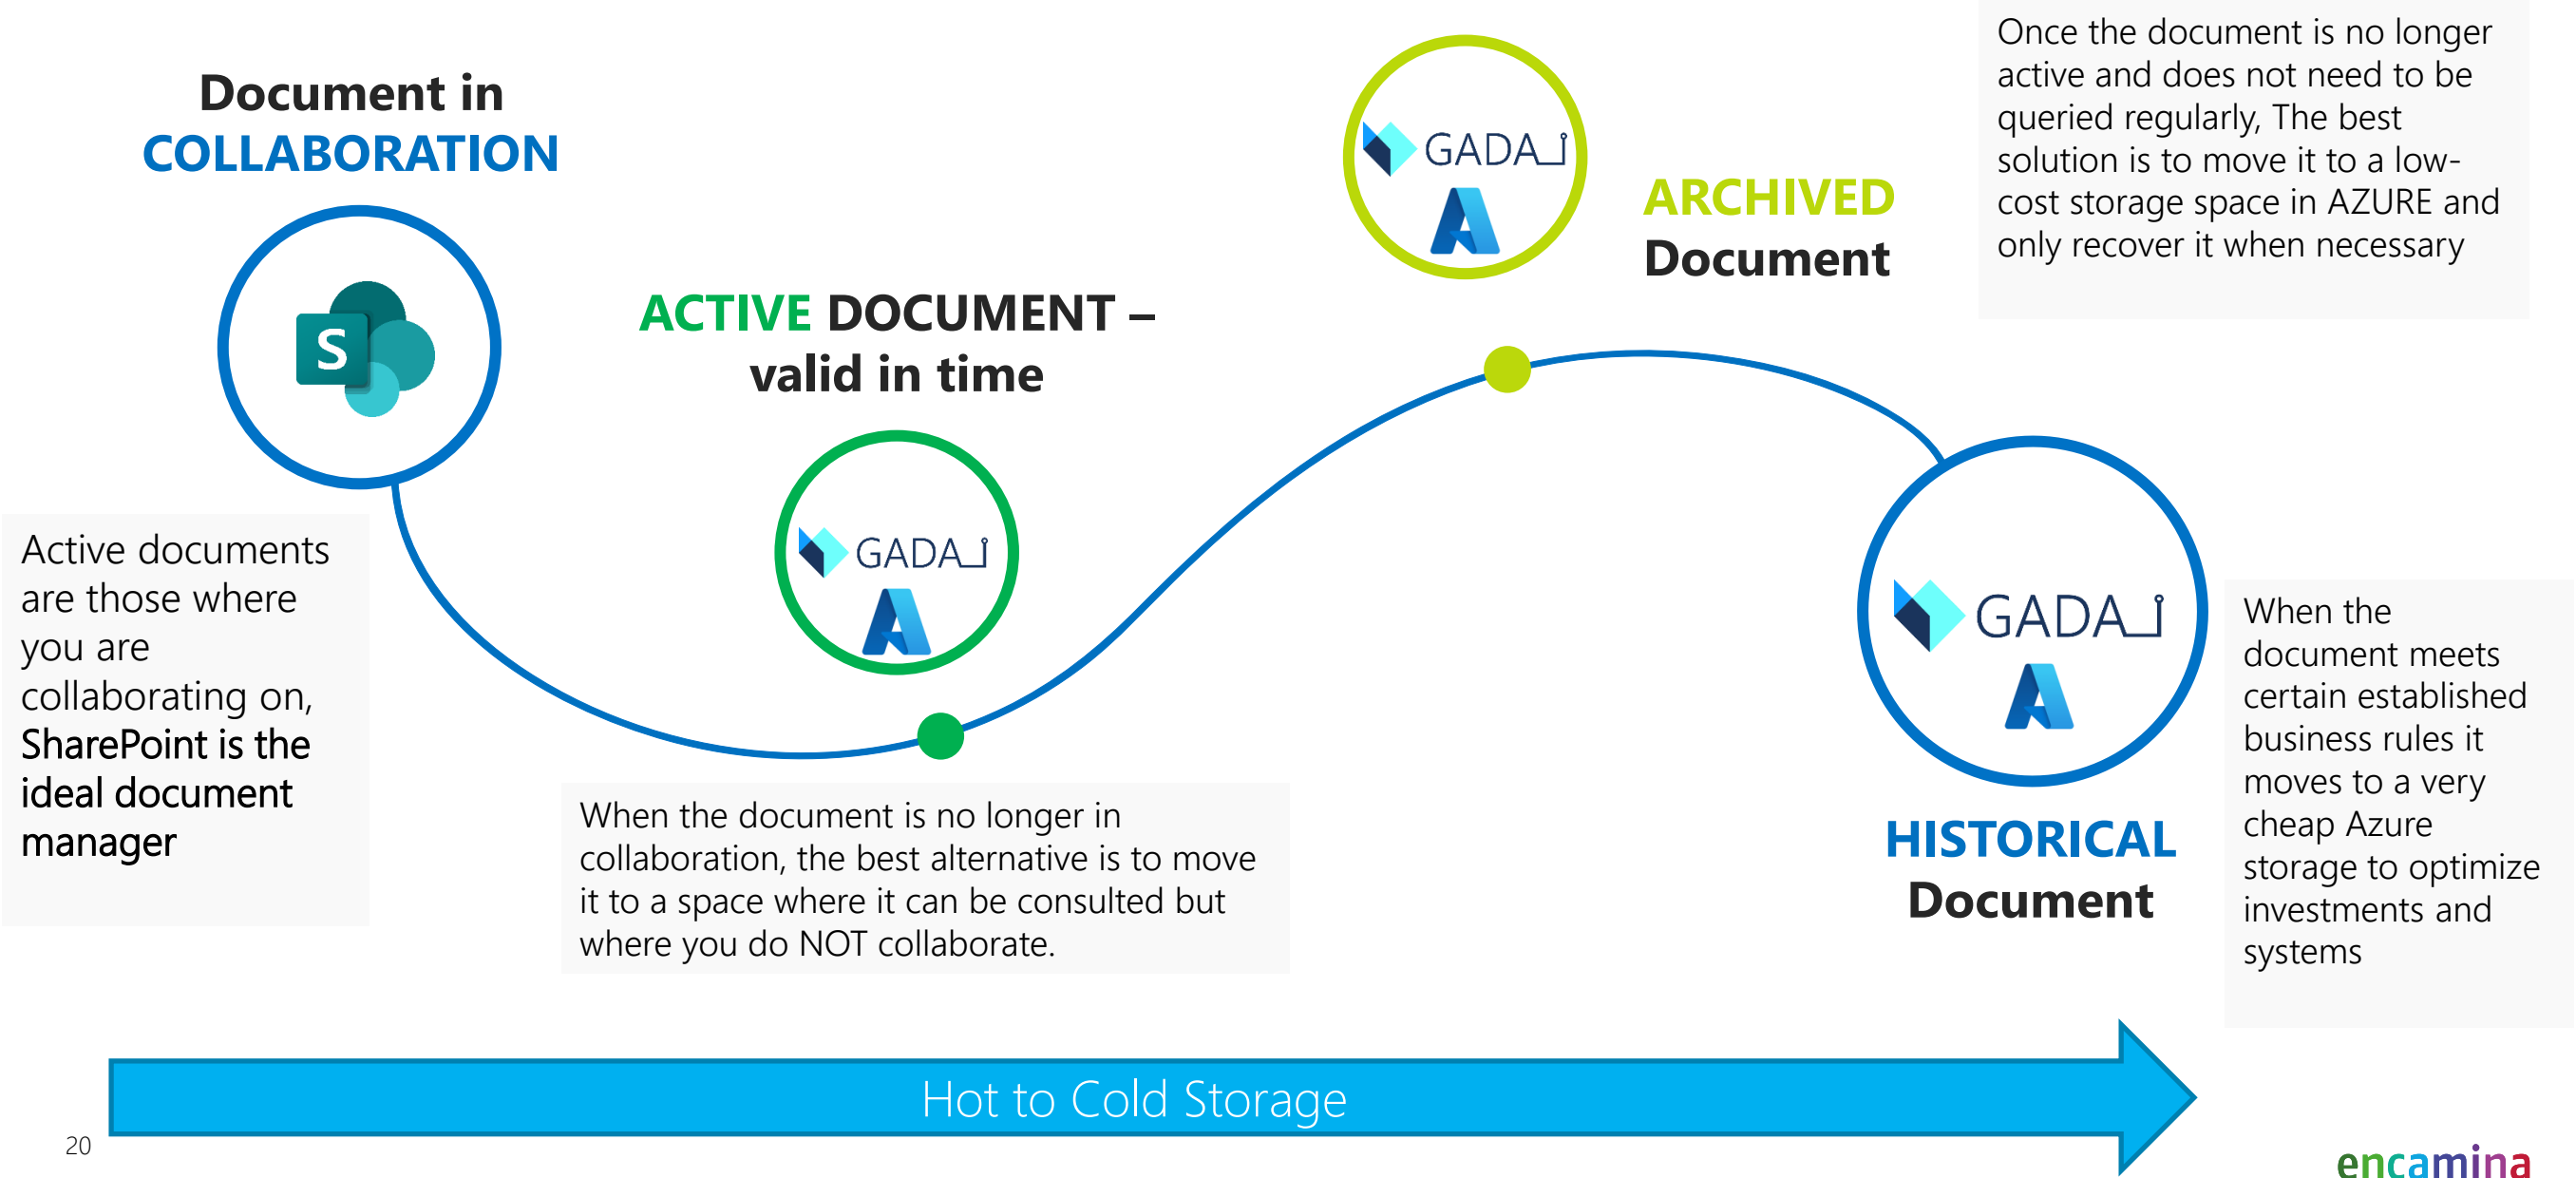

Complete file lifecycle management

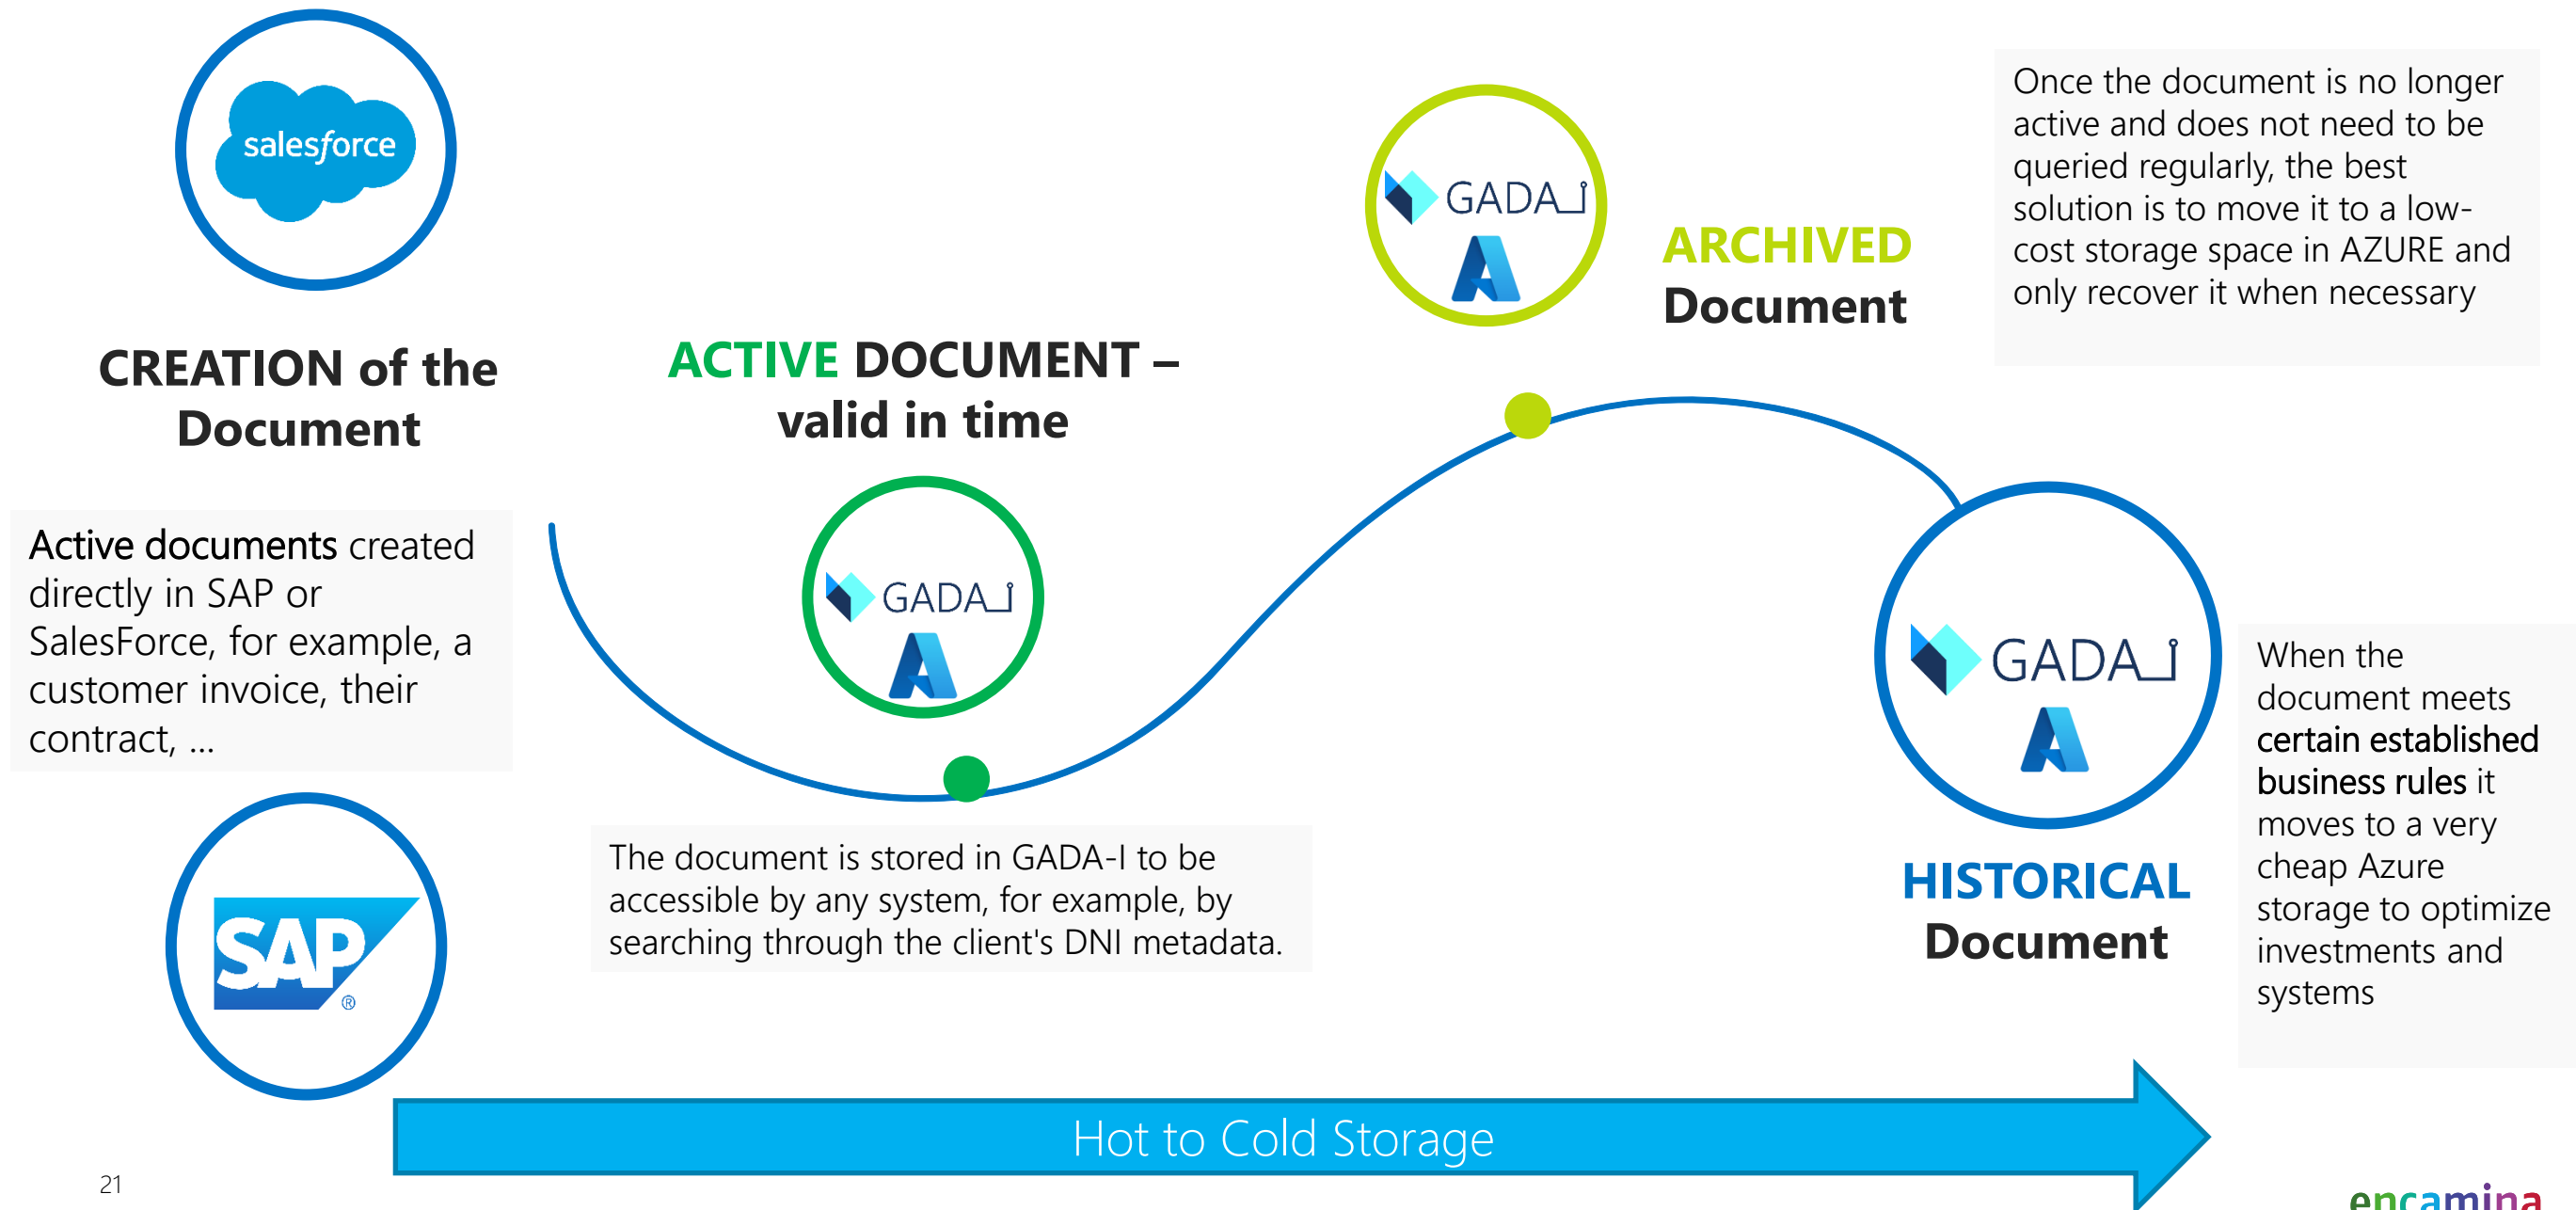

How to free up SharePoint space?: Intelligent document archiving with GADA-i

SharePoint + GADA-i come together for comprehensive file management

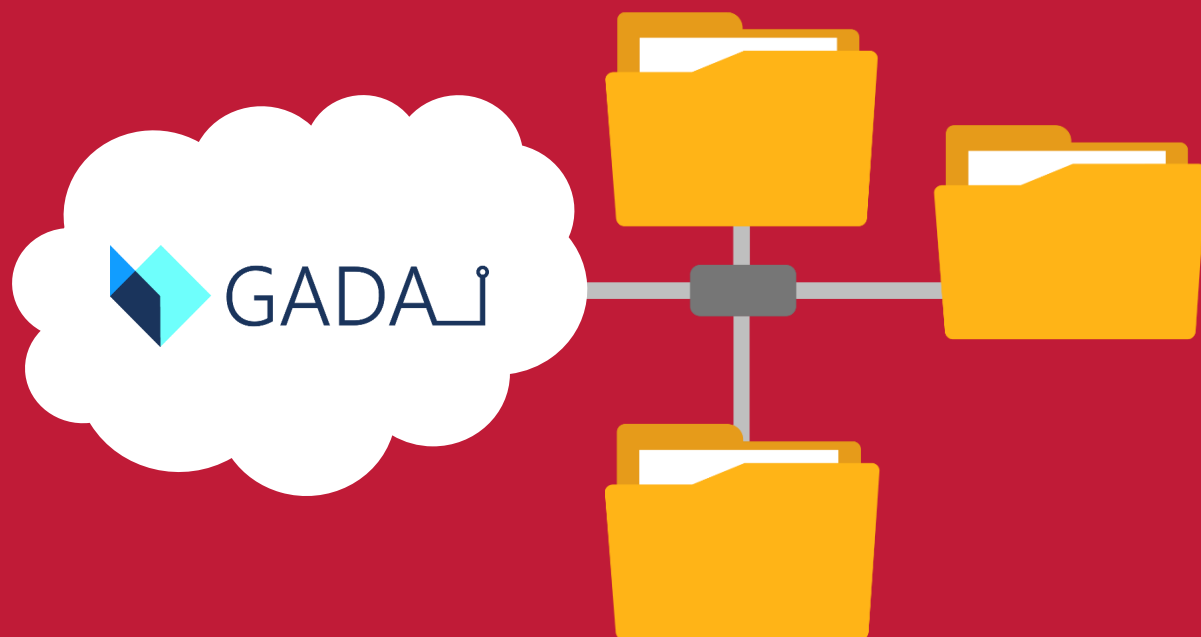

SAP/SalesForce + GADA-i for comprehensive file management

What does ENCAMINA offer me?

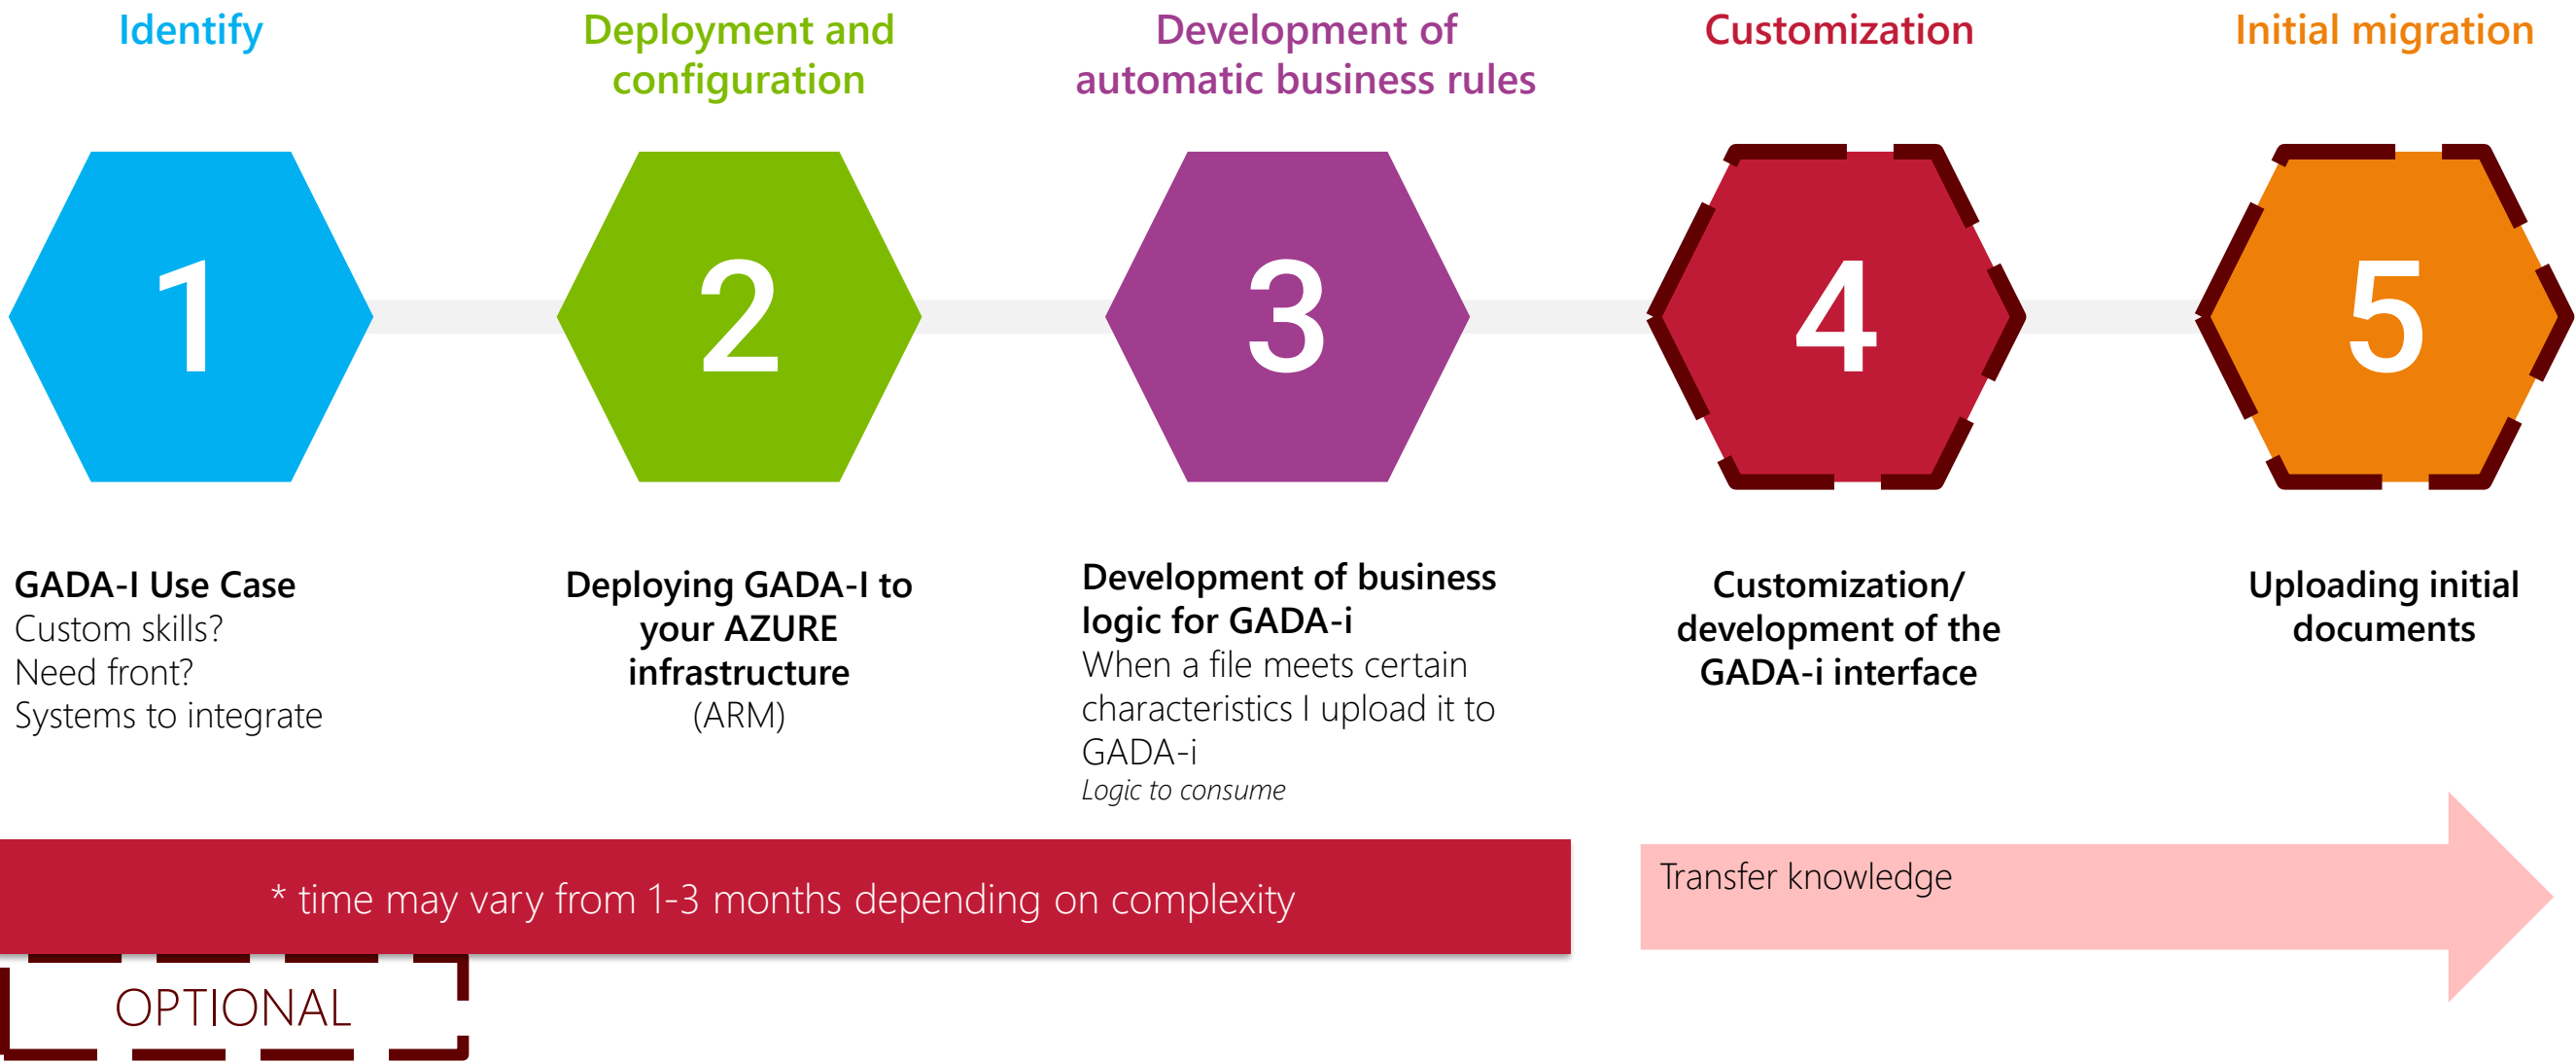

Gracias a GADA-i puedes almacenar archivos para consultarlos en cualquier momento

What ENCAMINA offers you

1. ENCAMINA offers the service of:
 1. **Deploy and connect GADA-i** to your document management system or to the **corporate repository** (an API integration with existing systems) to save documents in Azure.
 2. **Develop and expose GADA-i's front/file viewer to enable direct user interaction through a web application**
 1. This way, files can be recovered with a quick search using Azure services
 3. **Optionally** we can also:
 - Customize the front/file viewer.
 - Develop customized AI skills.
 - Migrate and upload existing files.

GADA-i implementation process

Entregables

- With the GADA-i project we provide the following deliverables
-

**Product Technical
Documentation**

Swagger

License fee 1 year

With the acquisition of the
license -> The start of the
support service

**Deployment the tailor-
made solution**

Migration plan (optional)

**Knowledge transfer
workshops**

GADA-i backed by Microsoft

Microsoft bets on GADA-i

- GADA-i is available on Azure MarketPlace, the business solutions store that Microsoft uses to promote Partner solutions.
- To establish the solution in the Azure MarketPlace and have the support of Microsoft, technical and functional audits have been passed satisfactorily:
 - Apply **security** best practices
 - Apply **best practices in code-level** solution development (**WAF**)
 - Stable **automatic deployments**
 - **100% integration** with all Azure capabilities
 - Ensures operability as soon as you deploy it in the Azure subscription

Microsoft certifies and bets on GADA-i as an archiving system in Azure

Razones por las que Gada es importante para ti

Why choose GADA-i

Classification, profiling, and generation of warnings from the document using an analysis based on **Machine Learning/Cognitive Services**.

Connected to any application with document management needs.

Manage the document lifecycle automatically

Applies automatic security policies and rules, with traceability of all accesses

Data indexing system for searches.

Customers who trust GADA-i

Port Authority of Valencia

Querying the historical archive with Cognitive Search

Solution

Search Application that OCRs, tags, classifies and indexes historic documents from the 19th century to the present day.

Results

- Provide access to the historical archive and Annual Reports to citizens and researchers.
- A new way to navigate documents using Facelets and tagging.
- Help the documentalists study and research classified historical documents using AI.
-

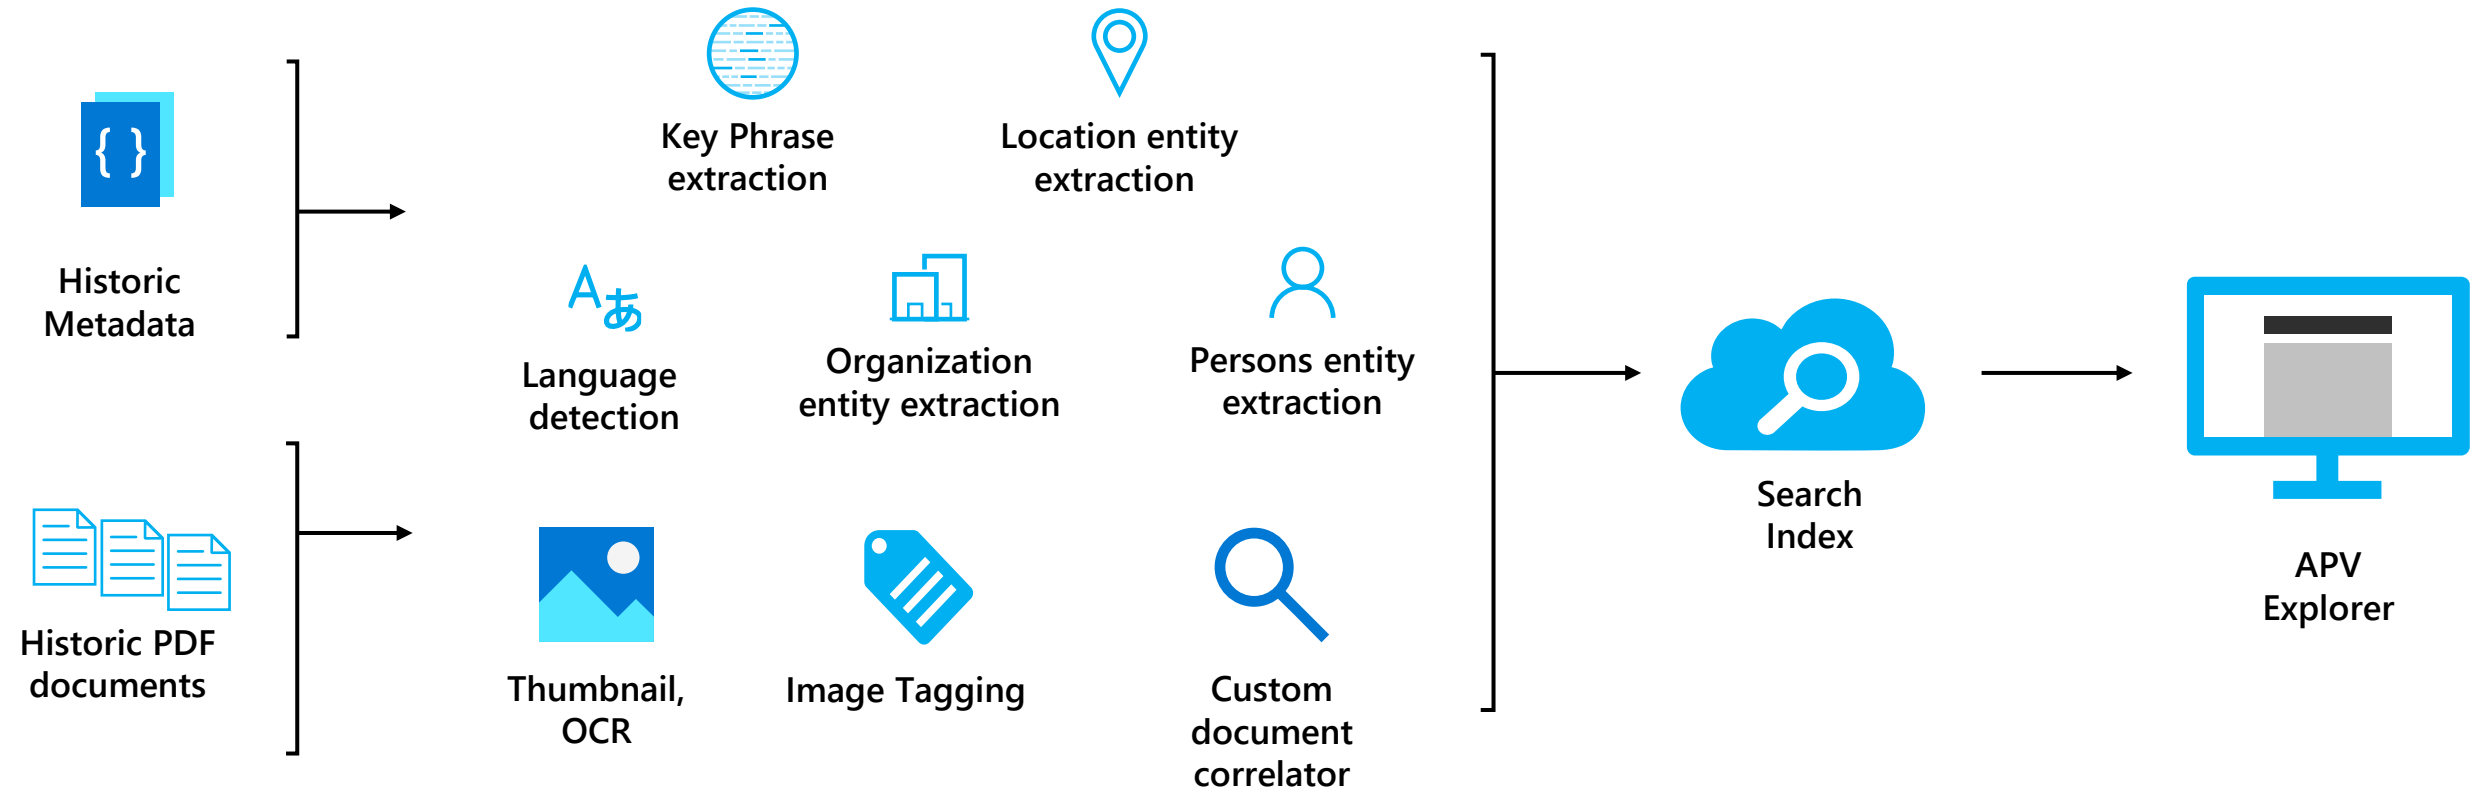

See GADA-i in action

“Historical port documentation is a documentary heritage that belongs to the citizens. With this project, and thanks to the application of Artificial Intelligence, the Port Authority of València makes available to citizens and researchers a magnificent way of accessing the knowledge it holds.”

Xavier Mulet i Baixauli
Head of Electronic Administration and Record Management

Port Authority of València Document Search

Characteristics

Description

Purpose

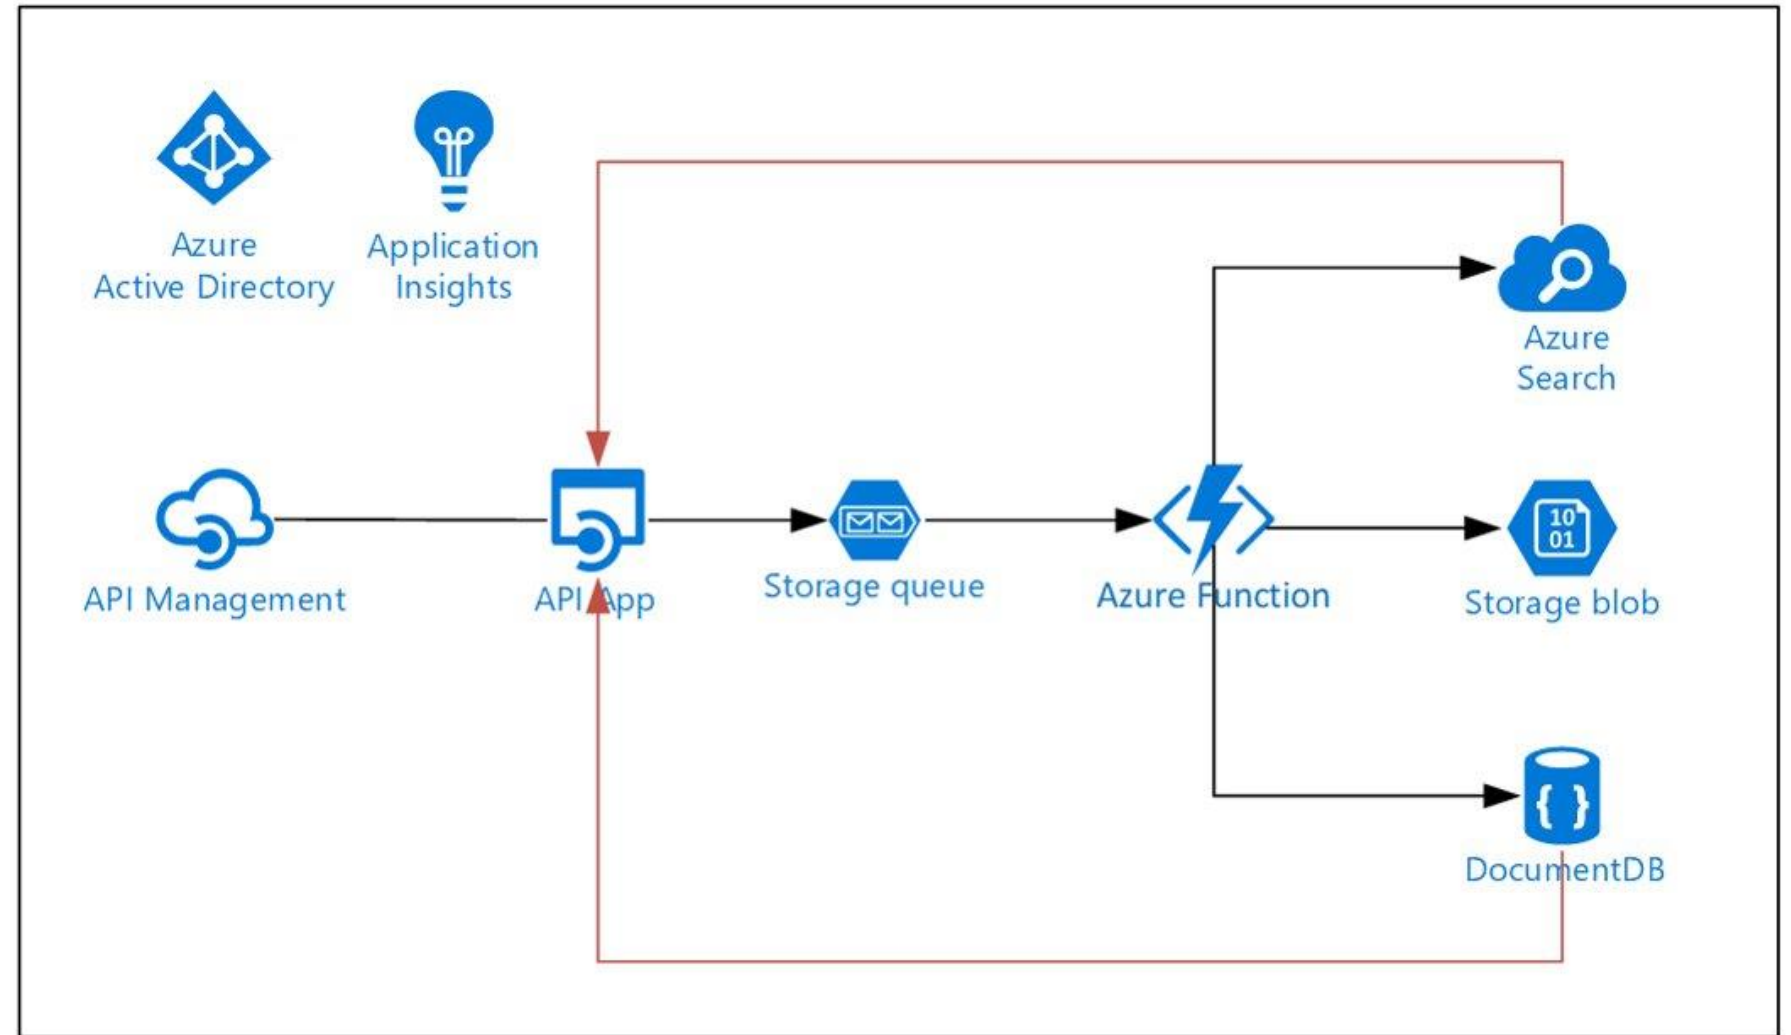

During the Platform Convergence Analysis Project FileNet and Documentum platforms has been identified as candidates for a unified platform based on open solutions for archiving. Main reasons are:

- Positive Economical business case
- Both systems are only used to archive documents.
- We are not using any special capabilities of a Document management system (DMS)

Goals

- Minimum Business Impact
- Multi tenancy platform
- Data isolation & Protection between companies
- Same performance as replaced systems
- Simplicity
- Cloud Ready

Reale Group

Industry Group - Infrastructure

Leading multinational **group** in **transport** and **construction** infrastructures

Characteristics

Purpose

During the development of the application "Experience in Work" arises the need to replace the **current storage of files** to an application that allows:

- Migration of current documents
- Secure management of stored data
- Transparent maintenance through the developed application
- Indexing of the files for later search

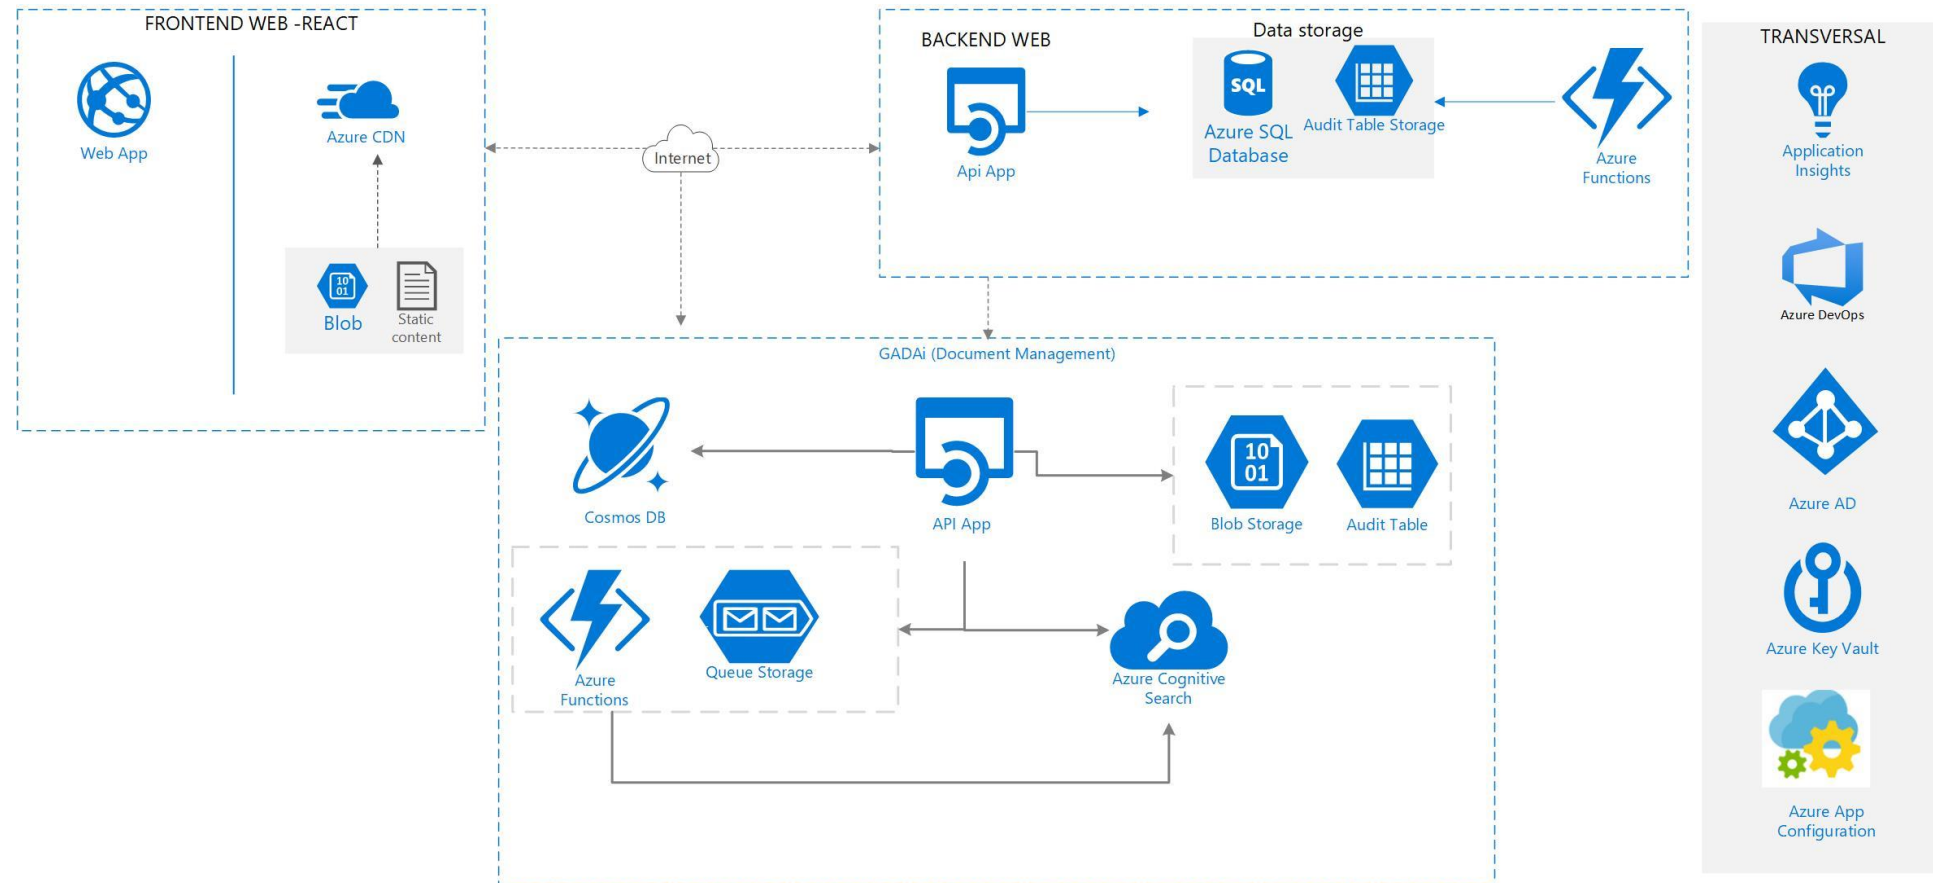

Goals

- Development accelerator
- Usable by other applications.
- Easy incorporation into the project architecture.
- In line with the technological stack of the solution.
- Guaranteed reliability and performance

Description

Industry Group - Infrastructure

Leading multinational **group** in **transport** and **construction** infrastructures

Why choose ENCAMINA?

Reasons to work with ENCAMINA

WHY WE ARE RELIABLE:

- Currently, as a Microsoft Priorized Managed Partner with 11 gold competencies, five silver, three advanced specialisations, 100 technical certifications, 4 MVPs and 1 Regional Director, it is a reference that ENCAMINA is one of the most recognised consultancies by Microsoft worldwide, for its talent and know-how.
-
- 21 years of life as a technological consultant in continuous progression validate the market's confidence and talent. More than two decades mean experience and consolidation together with freshness and innovation.
-

WHY WE ARE DIFFERENT:

- Deep coherence, alignment and conviction with our Values and our purpose as a company.
- ENCAMINA Thinks of Colors, like a contagious attitude in its customers.

Reasons to work with ENCAMINA

WHY WE ARE SPECIALISTS

- We only address what we are experts in, exclusively in the field of Microsoft technology.

Differential factors

Specialist team

The proposed human team has a large number of certifications and is composed of top-level professionals, recognised at the national and European level

Methodology

An agile and robust methodology that seeks to manage expectations, deliver promptly, and maximize satisfaction

Proactive project management

Robust and effective project management, with particular emphasis on the adequacy of the project to your needs, without forgetting the objective of meeting the milestones set and obtaining a result according to expectations.

Experience and references

The experience and references of ENCAMINA in this type of project, as well as of other nature, related to the technologies used

Value deliverables

Not only is it intended to give a solution to the current moment, but adapted integrated with your expectations and scalable with the growth of the company and M365

Coherent and workable roadmap

Based on our experience and the needs expressed in the previous phases
